

A Recommendation from Dr. Charles Trebilcock, DDS, MS

As a Prosthodontist, a fair portion of my clinical experience is restoring complex treatment plans. Yet, many just need routine crown and bridge. Starting in the summer of 2008, I began to utilize Digital Designs Dental Lab for these patients. I was cautious at first, sending a single crown, then a few more, including an anterior 3-unit bridge which was beautiful.

I could not be more pleased with the results and recently sent in an impression for a crown on my father. The crown & bridge work has been excellent without the need for a lot of "aids." Shade photos have been matched and diagnostic wax-ups or go-by casts have been copied. The EFDA's in my office rave about how easy these restorations are to prepare for cementation with little to no adjustments needed. Not once have we had to add a contact. Our office manager loves the predictability of scheduling "seats," and as a result our bottom line looks better at the end of each month.

The quality and service I've received from Digital Designs Dental Lab has been outstanding. I would not hesitate to recommend them to anyone looking for top-notch quality and service!

Professionally,

Charles Trebilcock, DDS, MS
